Ken

Sorry I thought I had attached my edits. I am available all day today to discuss. I will be out next week at NARPM and I will check my emails while there.

Thanks

Ken

I added some additional rationale at the end (highlighted text). I am ok with saying that no remedial action is required other than the possibility of institutional controls to restrict groundwater usage at AOC4 and or further evaluation of the data may justify changing the classification from 2 to 3. I

9568192

think that stating the groundwater use can/will be restricted by institutional controls is sufficient for the purpose of the memo.

Thanks

Here is a draft memo for the HHRA for AOC 4. I would like to add some more information on the groundwater classification and use, but I cannot find this in the documents produced by EA. If you have something on this we should try to add it to this memo.
